

WHAT IS CLAIMED IS:

1. An ornamental hairpiece connected to human real hair or animal real fur, comprising:

5            a wig unit in which a plurality of strands made of one or more materials selected from the group consisting of human real hair, artificial hair, animal real fur and artificial fur are arranged neatly; and

              a connection unit for connecting the wig unit to user's real hair,

10            wherein the connection unit is a designated position of an upper end of the wig unit, cohered by adhesive means, and includes a main body provided with a real hair reception hole formed at a central area, and real hair connection loops, to which the real hair is tied, inserted into the real hair reception hole.

15            2. The ornamental hairpiece as set forth in claim 1, wherein a body formation pipe is inserted into the main body.

20            3. The ornamental hairpiece as set forth in claim 1, wherein a body fixation thread is wound on an outer circumference of the main body.

25            4. The ornamental hairpiece as set forth in claim 2, wherein a body fixation thread is wound on an outer circumference of the main body.

              5. The ornamental hairpiece as set forth in claim 3, wherein the real hair connection loops are made of a part of the body fixation thread.

              6. The ornamental hairpiece as set forth in claim 4, wherein the real hair connection loops are made of a part of the body fixation thread.

30            7. A method for manufacturing an ornamental hairpiece connected to human real hair or animal real fur, comprising the steps of:

              (a) cutting off upper ends of a wig unit including a plurality of strands made of one or more materials selected from the group consisting of human real hair, artificial hair, animal real fur and artificial fur, which are arranged neatly, so that the strands have the

same upper line;

(b) inserting a body formation pipe into a central area of an upper portion of the wig unit so that the strands uniformly surround an outer circumference of the body formation pipe;

5 (c) thinly applying an adhesive on a designated position of the wig unit surrounding the outer circumference of the body formation pipe so that the strands are attached to each other;

10 (d) hardening the adhesive, and densely winding a body fixation thread on the position of the wig unit surrounding the outer circumference of the body formation pipe so that the strands are firmly fixed;

(e) forming real hair connection loops on an upper surface of the wig unit, and detaching the body formation pipe from the wig unit so that a real hair reception hole is formed through the wig unit; and

15 (f) thinly applying the adhesive to an outer circumference of the body fixation thread wound on the wig unit, and hardening the adhesive.
